4. Project description:	in this factory main raw material is pet chips. After storing of pet chips in feeding silos, this polymer is first conveyed to dryer and crystallizer part of bcf machine, in dryer & crystallizer, by extracting the extra humidity from pet chips, they will be ready to go the extruders. In extruder by melting of these chips, and after passing of different parts of machine as well as manifold, filters, spin pack & spinneret, the melt flow will transform to molten filaments, these filaments will pass quench boxes and after that by drawing and texturizing in a bcf box will be called as bcf yarns. At this stage we can sell bcf yarn to the
